DEPUTY

VS.

Court, DALLAS

CHRISTOPHER RADKE

County, TEXAS

AFFIDAVIT CONCERNING MEDICAL RECORDS

BEFORE ME, the undersigned authority, personally appeared Judith Bristow, who, being duly sworn, deposed as follows:

"My name is Judith Bristow. I am of sound mind, capable of making this affidavit, and personally acquainted with the facts herein stated, which are true.

I am the custodian of records for Baylor Medical Center at Garland. Attached hereto are 8 pages of records. These said 8 pages of records are kept by Baylor Medical Center at Garland in the regular course of business, and it was in the regular course of business of Baylor Medical Center at Garland for an employee or representative of Baylor Medical Center at Garland, with knowledge of the act, event, condition, opinion, or diagnosis recorded to make the record or to transmit information thereof to be included in such record; and the record was made at or near the time or reasonably soon thereafter. The records attached hereto are the original or exact duplicates of the original."

Judith Bristow, RRA
Affiant (Signature of Custodian)

SIGNED UNDER OATH BEFORE ME ON September 18, 1997.

Joy Cooper
Notary Public in and for the State of Texas.

THE STATE OF TEXAS
TO ANY SHERIFF OR ANY CONSTABLE OR ANY PEACE OFFICER
OF THE STATE OF TEXAS - GREETINGS:
YOU ARE HEREBY COMMANDED to summon

JUDY BRISTOW, CUSTODIAN OF MEDICAL RECORDS
BAYLOR MEDICAL CENTER, 2300 MARIE CURIE
GARLAND TX 75042

MEDICAL DECISION
MAKING:

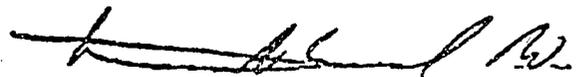

The patient was stable during her stay here. The patient was quite anxious and was given Valium 5 mg IM without any change in her demeanor. I contacted Dr. Holmes, our plastic surgeon on-call, and discussed the case with him. He wants me to close the laceration of the lip and have her follow up in the office with him.

I contacted the patient's orthodontist, Dr. Kevin Coles. He came to the Emergency Department to see the patient and evaluate her. I discussed with him treatment from that point. The patient was medicated with a total of 12 mg Versed IV. Dr. Coles at this point cut her braces and moved her teeth into proper alignment.

At this point I anesthetized the upper lip locally with 1% Xylocaine with epinephrine. It was then cleansed thoroughly and closed with 6-0 Ethilon sutures with good approximation. The patient tolerated the procedure well. Her pulse oximetry remained in the high 90s throughout her stay. The patient will be discharged. The facial surgeon, Dr. Hill, was contacted and she will follow up with him for further evaluation of the teeth and she will involve him in the lip laceration as well.

DIAGNOSES: 1. Acute lip laceration.
2. Acute dental trauma.

PLAN: (1) Laceration instructions. (2) Follow up with Dr. Hill on Monday. (3) Return to the Emergency Department sooner for any worsening or further problems in the interim time. (4) The patient was discharged in stable condition.

LACERATION, LIP & MOUTH

A LACERATION is a cut through the skin. When the cut is on the lip, it may be closed with stitches or surgical tape ("Steri-Strip"). Some cuts inside the mouth are left open, but when stitches are used they are usually the kind that dissolve.

HOME CARE:

- 1) Eat soft foods to reduce pain with chewing.
- 2) If the cut is inside of your mouth, rinse your mouth after each meal and at bedtime with a mixture of equal parts water and Hydrogen Peroxide (do not swallow!). Or, you can use a cotton swab (Q-tip) to apply Hydrogen Peroxide directly onto the cut.
- 3) If the cut is on your outer lip, clean the wound with soap and water, then use Hydrogen Peroxide to loosen and remove any blood or crust that forms. Apply a thin layer of Neosporin or Bacitracin ointment. This will keep the wound and make the stitches easier to remove.

FOLLOW UP:

Most mouth and lip wounds heal within five days. However, even with proper treatment, there is some risk of infection. Therefore, check the wound in two days for the signs of infection listed below.

Sutures on the lip or face should be removed within 5 - 6 days to avoid permanent stitch marks. If dissolving sutures were used inside the mouth, they will fall out or dissolve on their own, and do not need to be removed.

If TAPE CLOSURES ("Steri-Strips") were used, they may be removed five days after your injury, unless told otherwise.

RETURN PROMPTLY or contact your doctor if any of the following:

- Increasing pain, redness or swelling around the wound
- Discharge (pus) coming from the wound
- Fever over 100 (oral)

SPECIAL INSTRUCTIONS

FOLLOW UP WITH ORTHODONTIST ON MONDAY. RETURN TO EMERGENCY DEPT. IN 5 DAYS FOR SUTURE REMOVAL.

I HAVE RECEIVED AND UNDERSTAND THE INSTRUCTIONS ABOVE.

Thank you for choosing us for your medical needs. We hope you are satisfied with the care you received. Please call if there is any problem. For questions about your bill, note the following numbers:

EMERGENCY DEPARTMENT RECORD

Patient Name: RADKE, DIANA
Physician Name: STEVEN B. HOEL, D.O.
Hospital #: 717997
Admission Date: 02/10/96

CHIEF COMPLAINT: Lip and teeth injury.

PRESENT ILLNESS: This is a 28-year-old female who presents to the Emergency Department after slipping and falling forward. She struck her upper lip and teeth on the back of a car. She was wearing braces. She sustained laceration to her lip as well as injury to the braces and to the underlying teeth. She has presented here for evaluation for that reason. The patient denies any other injury.

PAST MEDICAL HISTORY: Negative for heart disease. No asthma or lung disease. No diabetes. No hypertension. No ulcer disease.

SOCIAL HISTORY: The patient is married. Otherwise noncontributory.

FAMILY HISTORY: Noncontributory.

REVIEW OF SYSTEMS: Positive for the current injury only.

PHYSICAL EXAMINATION:

VITAL SIGNS: Pulse rate 112, respiratory rate 24, blood pressure 130/70.

GENERAL: The patient is alert and oriented.

HEENT: There is a stellate laceration to the upper lip with a flap. It appears that there may be avulsion present as well. The total length of the laceration is 2.5 cm. It does extend into and through the vermilion border. There is no laceration to the buccal membrane. There is damage to the braces overlying the central incisors on the maxillary side. The two central incisors and the lateral incisor on the left are partially avulsed as well. The remainder of the teeth appear normal. The nose and pharynx are negative.

NECK: Supple. Nontender.

CHEST: The lungs are clear.

HEART: Regular rate and rhythm. No murmurs.

ABDOMEN: Benign.

PATIENT'S NAME

DA: ASA

12-14-95

Diana Radke

The patient's a 28 y. o. white female who is presenting with blotchy rash on the back, neck and upper arms and chest. This has been present for two weeks. She had a sore throat two weeks ago but was treated with Biaxin. She is also having difficulty sleeping and she feels no energy during the day since her baby was born. She notes she has gained 40 to 50 pounds in the last 14 months and notes she may have a tendency towards nervous eating. She has also been under a lot of stress and has been malaised.

PAST MEDICAL HISTORY: Positive for asthma.

DRUG ALLERGIES: Aspirin.

SOCIAL HISTORY: Positive for one pack of cigarettes per day and she admits to occasional alcohol which equates to once or twice per month.

OB-GYN: She is gravida three, para one.

FAMILY HISTORY: Positive for hypertension in the mother. Otherwise unremarkable.

PHYSICAL EXAM: Temperature is 97.0. BP is 112/82. Height is five foot nine inches. Weight is 193. HEENT is unremarkable. Neck is supple with no thyroid enlargement or lymphadenopathy. Lungs are clear. Heart regular rate and rythmn without murmur. Abdomen is unremarkable. Extremities without edema or cyanosis. Skin is positive for diffuse hypopigmented macular papular rash with some crusts compatible with tinea versicolor. CBC, SMAC and TSH are pending.

- IMPRESSION: 1. ACUTE DERMATITIS PROBABLE TINEA VERSICOLOR.
 2. PROGRESSIVE MALAISE.
 3. HYPERLIPIDEMIA.

- PLAN: 1. Diflucan 100 mg #4 samples are given, two today then one daily.
 2. Selsin lotion 4 ounces.
 3. Prozac 10 mg #28 one daily in a.m.
 4. Recheck in 2 weeks and monitor progress with Prozac and adjust doseage as needed. Consider increasing to 20 mg daily if tolerated well. SGB

operator: 911 what is your emergency
officer: yeah Garland this is Chris from Dallas PD I have a transfer
call on a shooting
operator : okay go ahead
voice: hello
operator: yes
voice: hello hello
voice: (inaudible) sunset uh drive I think it its off Buckingham
operator: Is it off Northlake do you know
voice: Northlake and Sunset its the corner house
operator: corner house
voice: 1001
operator: okay do you know what where the weapons is that she shot
herself with
voice: I have no clue I just got a call from my brother in law
telling I'm her brother
operator: okay stay real calm okay your doing really good
voice: we don't know if there is a baby over there
operator: (inaudible)
voice: and and him and he is the only one that called and he and we
don't know whats going on we thought we needed to call and we are
heading over there now to
operator: okay I want you to stay on the phone for a few minutes okay
voice: okay
operator: whats your name sir
voice: my name is Mike
operator: Mike whats your last name Mike
voice: Morrison
operator: Morrison
voice: M o r r i s o n
operator: okay are you going to be on route 1001 Sunset
voice: yes we are
operator: okay whats your telephone number there
voice: the telephone number here is 388-9301
operator: okay what's the telephone number inside the residents
voice: uh over there 205-0118
operator: 0118
voice: yes
operator: 205-0118
voice: yes
operator: how old is this female
voice: she is 28
operator: 28 years of age
voice: yes
operator: so her her brother in law called you
voice: my brother in law her husband my sister and her husband he
called me and told me this
operator: okay so they advised you that the female has shot herself
voice: yes but he I don't know I'm I'm not there and I cant he I cant

he's I cant understand alot that he is saying
operator: uh huh
voice: so I just hung up and called
operator: Is he is supposed to be at this location
voice: he is there he supposed to be there and the baby is supposed
to be there
operator: okay and how long will it take you to get there
voice: It will take us probably 5 minutes to get there 5
operator: and to the telephone number 205-0118
voice: that's it
operator: did he say anything to where the weapon where the gun was
anything
voice: he said that they were in the living room that's all I could
understand
operator: he said we they were in the livingroom
voice: in the living room yea
operator: okay I'm going to hang up with and I'm going to try to call
over there okay if you want you can go over if you want to you might
want to wait outside until officer can get there until we can secure
the scene and see whats going on inside
voice: are they on there way now
operator: yea I going to seen I'm going to get them out there okay
voice: because I don't I don't know if this guy is serious or what
operator: okay I'm going to get them out there I'm going to try to
call her okay
voice: thank you
operator uh huh bye bye

Diana Radke - Complainant
Homicide

EVIDENCE:

Received from V. Thompson March 1, 1996:

2. One 12 gauge Savage double barreled shotgun, s/n C073392
- 5-~~4~~ Small piece of flooring with unknown type impression and cast of impression
4. Pellet found on living room floor

Received from S. Spotswood, M.D., on March 6, 1996:

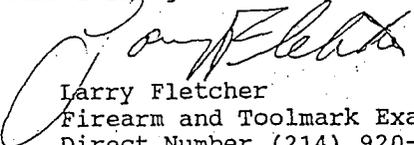

11. Pellets and wads recovered at autopsy

RESULTS:

The Item 2 shotgun is mechanically functional with the trigger pull force for the left barrel is seven to eight pounds and the trigger pull force for the right barrel is six to seven pounds. Blood was detected on both barrels and the muzzle of both barrels. Due to the unburned gunpowder in the left barrel and the breech face, it appears that the left barrel was used more recently than the right barrel. No spent shotshell has been submitted at this time.

The Items 4 and 11 are identified as either #0 or #00 size Buckshot. The wads in Item 4 are 12 gauge.

The impressions in the Item 5 flooring material were not made by the butt or other areas of the Item 2 shotgun.

Diana Radke - Complainant
Homicide

EVIDENCE:

Received from J. Rogers on May 21, 1996:

2. One 12 gauge Savage double barreled shotgun, s/n C073392 resubmitted
3. One 12 gauge spent shotshell
4. One 12 gauge shotshell

RESULTS:

The Item 2 shotgun was test fired and the test rounds compared to the Item 3 spent shotshell. Comparisons determined that the Item 3 spent shotshell was fired from the left barrel of the Item 2 shotgun.

CORRECTED REPORT

This report serves to reflect correct Item numbers 16 and 17, not Items 3 and 4 on report dated 5-23-96.

EVIDENCE:

Received from J. Rogers on May 21, 1996:

2. One 12 gauge Savage double barreled shotgun, s/n C073392 resubmitted

NEW SUBMITTAL

16. One 12 gauge spent shotshell
17. One 12 gauge shotshell

RESULTS:

The Item 2 shotgun was test fired and the test rounds compared to the Item 16 spent shotshell. Comparisons determined that the Item 17 spent shotshell was fired from the left barrel of the Item 2 shotgun.

Case No. 0722-96-0519SS

Name: Radke, Diana

Age: 28

Race: White

Sex: Female

Date of Death: 29 FEB 1996

Date of Examination: 01 MAR 1996

Time of Death: Approx. 8:56 pm

Time of Examination: 10:00 am

Pronounced at: 1001 Sunset Drive
Garland, Dallas County, Texas

AUTOPSY REPORT:

ORGAN WEIGHTS:

Brain	950 g	R. Lung	380 g	R. Kidney	145 g
Heart	275 g	L. Lung	330 g	L. Kidney	135 g
Liver	1330 g	Spleen	90 g		

EXTERNAL EXAMINATION:

The body is identified by tags. Photographs, fingerprints, palm prints, and x-rays are taken. Paper bags are present on the hands when the body is received.

The body is received wearing a plaid long-sleeved shirt buttoned over a black short-sleeved T-shirt, black stretch stirrup pants, a white brassiere, black thong panties, two white socks, and two white athletic shoes. Also received with the body is a ring with multiple keys. Around the neck are two yellow metal chain necklaces, one with a small pink clear stone pendant.

The body is that of a normally developed white female which appears consistent with the recorded age of 28 years. The body measures 66 inches (167.6 cm) in length, weighs 163 pounds (73.9 kg), and appears of average nutritional status. There is good preservation in the absence of embalming. Posterior blanching lividity and partial rigidity are present. The body is cool subsequent to refrigeration.

There is an average amount of wavy long blond scalp hair. The body hair appears average in amount and distribution for an adult female. The ears are each pierced once and are unremarkable. The corneae are clear and the irides are blue. The mouth shows natural teeth with silver-colored braces. The neck, chest, and back are unremarkable. The abdomen is unremarkable except for stretch marks. The extremities are symmetrical and unremarkable and the genitalia are those of a female.

STATE'S
EXHIBIT

109

Name: Radke, Diana

IDENTIFYING MARKS AND SCARS:

There are approximately three slightly irregular linear longitudinally oriented scars on the anterior surface of the lower left forearm and wrist, measuring up to 4 inches in length. There is a single 2 inch long, slightly irregular linear scar on the back of the right hand. There is a tiny green and red tattoo of a rose on the lateral surface of the left ankle.

EVIDENCE OF TREATMENT:

None present.

EVIDENCE OF INJURY:

Shotgun wound:

There is a shotgun wound of entrance centered on the mouth. The wound consists of a single central round defect with smooth margins that show no scalloping and no satellite defects. The diameter of the wound cannot be evaluated due to the degree of facial destruction, but the margins of the wound show abrasions and a band of dense soot up to 3/8 inch in maximum width. On the skin of the chin approximately 1/2 inch below the wound margin is a separate 3/4 inch maximum area of soot. This surrounding skin shows no stippling.

Extending outward from the central defect are multiple lacerations, up to 4 inches long, creating a large stellate defect involving most of the front of the face.

The charge perforates the lips, and causes extensive destruction of the oral cavity and the facial structure. There are soot deposits on the mandible and on the tongue, with extensive destruction of the anterior portion of the tongue. Small amounts of light-colored filler material and gunpowder are present inside the mouth area. The charge then perforates the cranium with extensive fracturing of essentially all of the bones of the face and cranium, with collapse of the head. There is extensive destruction of the brainstem, cerebellum, and the inferior half of the cerebrum, including the midbrain and basal ganglia regions. There are fractures of the left side of the hyoid bone and of upper cervical vertebrae. Two round disk-shaped wads and multiple buckshot pellets are recovered from within the brain, the right and posterior scalp regions, and the bone. The pellets and wadding are placed in an appropriately labeled envelope and submitted to the Criminal Investigation Laboratory. There is a partial exit wound on the right side of the head, centered on the anterior attachment of the right ear to the face. The wound consists of an 8 inch long, vertically oriented, unabraded slit-like defect which is gaping open to expose brain tissue. There is a similar vertically oriented, gaping, slit-like 4-1/2 inch long laceration on the upper front of the face, extending from the mid nose to the mid anterior hairline.

The pathway of the projectiles are from front to back, left to right, and upward. The appearance of the range of fire on the skin is contact.

Name: Radke, Diana

Also submitted for evidence are handwashings, head hair standards, fingernail clippings, and blood.

Other injuries:

There is a 5/8 inch diameter fresh contusion on the upper front of the right thigh, with two 1-1/2 inch fresh contusions on the front of the right leg. A 2 inch fresh contusion is on the front of the left leg.

There is a single 1 inch diameter resolving mottled yellow-green contusion on the right arm. There is a small chip off the end of the fingernail of the left third finger. The fingernails, otherwise, are all intact and show only slightly chipped nail polish.

There are no injuries on the chest, abdomen, or back, either externally or internally.

The previous injuries, having already been described, will not be described again.

INTERNAL EXAMINATION:

Apart from the features described above, examination of the organs and tissues which comprise the HEAD, CENTRAL NERVOUS SYSTEM, NECK, BODY CAVITIES, CARDIOVASCULAR, RESPIRATORY, HEPATOBILIARY, LYMPHORETICULAR, GENITOURINARY, GASTROINTESTINAL, ENDOCRINE, and MUSCULOSKELETAL SYSTEMS reveals all to be within the usual limits of size, character and position for age, sex, and development.

In particular, it is noted that the thyroid cartilages are intact and the lumen of the larynx is not obstructed. The heart shows patent coronary arteries with no atherosclerosis or thrombi, and the aorta shows only superficial atherosclerosis, consisting of a few luminal streaks. The airways are unobstructed and the pulmonary arteries contain no thromboemboli. The gallbladder contains approximately 8 ml of brown bile with no calculi. The urinary bladder contains approximately 50 ml of clear yellow urine. The stomach contains approximately 200 ml of thick yellow-tan lumpy food material with no pills or capsules. The fat of the abdominal wall measures up to approximately 2 inches in thickness. No other significant abnormalities are noted.

COPY

Name: Radke, Diana

FINDINGS:

1. Shotgun wound.
 - a. Entrance wound - mouth.
 - b. Injuries - perforations of brain and skull, with collapse of the cranium and large gaping entrance and partial exit wounds.
 - c. Recovery - multiple birdshot pellets and two round disk-shaped wads recovered from within cranium.
 - d. Exit wound - partial exit wound located on right side of head.
 - e. Pathway - front to back, left to right, and upward.
 - f. Apparent range of fire - contact, with soot on the lips and inside the mouth.
2. Few small fresh contusions on the fronts of both legs and the right thigh.
3. Single resolving contusion on right arm.

CONCLUSION:

Based upon the autopsy findings and history as available to us, it is our opinion that Diana Radke, a 28-year-old white female, died as the result of a shotgun wound of the head.

MANNER OF DEATH: Homicide.

TOXICOLOGY:

Blood: Alcohols and Acetone - negative.
 Marihuana/Cannabinoids (GC/MS) - negative.
 Drug Screen -
 0.27 mg/L fluoxetine.
 0.13 mg/L norfluoxetine.
 0.75 mg/L phentermine.
 0.22 mg/L fenfluramine.

Vitreous: Alcohols and Acetone - negative.
 Na+ - 135 mEq/L Glu - <25 mg/dL.
 K+ - 11 mEq/L VUN - 8 mg/dL.
 Cl- - 122 mEq/L.

INTEROFFICE MEMORANDUM

TO: DCME# 0722-96 (SS) FL#: 96P0489
DATE: August 21, 1996 GPD#: 96-435
COMPLAINANT: Diana Radke
SUSPECT: Christopher Radke
OFFENSE: Homicide

COPY

EVIDENCE:

Received from S. Spotswood, M.D., on March 6, 1996:

- 13: Autopsy blood sample, DCME# 0722-96
- 14: Fingernail clippings - Right
- 15: Fingernail clippings - Left

STATE'S
EXHIBIT

78

SEROLOGICAL RESULTS:

Blood was detected on one fingernail clipping in item 14 by a presumptive test only.

Traces of blood were detected on four fingernail clippings in item 14 and four fingernail clippings in item 15 by a presumptive test only.

Blood was not detected on one fingernail clipping in item 14 and one fingernail clipping in item 15.

DNA RESULTS:

DNA was extracted from tissue from one fingernail clipping in item 14 and item 13 autopsy blood sample, DCME# 0722-96. DNA banding patterns were obtained from item 13 using the restriction enzyme Hae III and the single-locus probes (loci) LH1 (D5S110) and YNH24 (D2S44).

No DNA banding pattern was obtained from tissue from fingernail clipping in item 14 due to an insufficient amount of high molecular weight human DNA.

HLA DQA1 and Polymarker types were detected from the following:

Item#/Source	DQA1	LDLR	GYP A	HBGG	D7S8	Gc
14A: Tissue from fingernail clipping	2,4.1	AB	AB	AB	B	AC
13: Autopsy blood sample, DCME# 0722-96	2,4.1	AB	AB	AB	B	AC

CONCLUSIONS:

Based on the HLA DQA1 and Polymarker results, the source of item 13 autopsy blood sample is a potential contributor of the DNA detected from item 14A tissue from fingernail clipping. A population frequency estimate will be provided upon request.

Diana Radke - Complainant
Christopher Radke - Suspect
Homicide

EVIDENCE:

Received from V. Thompson on March 1, 1996:

3: T-shirt
8: Boots

Received from S. Spotswood, M.D. on March 6, 1996:

13: Autopsy blood sample, DCME# 0722-96

Obtained from Christopher Radke on February 10, 1997:

18: Blood sample

RFLP RESULTS:

DNA was extracted from the items listed above.

DNA banding patterns were obtained from items 3T₁, 13 and 18 using the restriction enzyme Hae III and the single-locus probes (loci) YNH24 (D2S44).

No DNA banding pattern was obtained from item 3T₁ using the restriction enzyme Hae III and the single-locus probes (loci) LH1 (D5S110) and V1 (D17S79) due to an insufficient quantity of high molecular weight DNA.

The DNA banding pattern obtained from item 3T₁ shirt is consistent with the DNA banding pattern obtained from item 13 autopsy blood sample using the single-locus probe YNH24.

PCR RESULTS:

HLA DQA1 and Polymarker types were obtained from the following.

Item#/Source	DQA1	LDLR	GYP A	HBGG	D7S8	Gc
3: shirt	2,4.1	AB	AB	AB	B	AC
8: Boot (right)	2,4.1	AB	AB	AB	B	AC
13: Autopsy blood sample Diane Radke	2,4.1	AB	AB	AB	B	AC
18: Blood sample Christopher Radke	2,4.2/4.3	AB	AB	B	B	C

CONCLUSIONS:

Based on the HLA DQA1 and Polymarker results, Christopher Radke is not the contributor of the DNA detected on items 3 shirt and 8 boot.

Based on the HLA DQA1 and Polymarker results, the source of item 13 autopsy blood sample is a potential contributor of the DNA detected on items 3 shirt and 8 boot.

The probability of selecting an unrelated individual at random having the HLA-DQA1 and Polymarker types as obtained from item 8 boot (as does item 13 autopsy blood sample) is approximately one in 2500 Caucasians, one in 74,000 African Americans and one in 5600 Hispanics.

The probability of selecting an unrelated individual at random having the HLA DQA1, Polymarker and DNA banding pattern using the probe YNH24 as obtained from item 3T, shirt (as does item 13 autopsy blood sample) is approximately one in 110,000 Caucasians, one in 20 million African Americans and one in 450,000 Hispanics.

Review of Records

Crime Scene Narrative

defendant's state of mind on 2/29/96 described by officer as "very uncooperative and agitated" during hand washing procedure @ residence following shooting

defendant was observed to have a scratch mark on left side of neck, abrasion on right chest area, scratches on stomach and back, hands were red

Autopsy Report

5'6", 163 lbs

approx 3 slightly irregular linear longitudinally oriented scars on anterior surface of lower left forearm and wrist measuring up to 4 inches long. Single 2" long slightly irregular linear scar on back of right hand. Rose tatoo on ankle.

Office Records of Physician, Steven Bander, D.O.

12/14/95 office visit

40-50 lb weight gain past 14 mos 5'9", 193 lbs

no energy

"may have tendency towards nervous eating"

"lot of stress" "trouble sleeping" "been malaised"

Prozac 10mg started

12/20/95 office visit

asks for "weight management"

started on Fastin and Pondamin, Prozac continued

1/3/96 office visit

weight down 12 lbs

prozac increased to 20 mg daily, Fastin and Pondamin maintained

1/22/96 office visit

report of sleep disturbance, 2-3 hrs solid sleep per night

weight down 8 more lbs

mentions stress of marriage and 15 mo old child

1/29/96 apparently telephone call to Dr's office

order for Desyrel 50 mg daily up to 100 mg daily prn called in

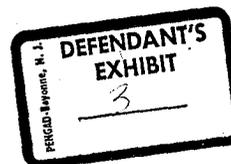

reported sleeping only 2-3 hrs at a time

2/8/96 office visit

weight 164.5 lbs

Fastin, Pondamin, and Prozac renewed; Desyrel continued as had been given 90 day Rx

2/26/96 last office visit to get sample bc meds

per Billy Radke
difficulty in area motivation with household chores per Janie Caldwell
re: depression, "she did tell me when she went on prozac. She told me she was having
problems, get depressed a lot." per Janie Caldwell

Indications of BPD

frantic efforts to avoid real or imagined abandonment

frequent paging of CR
frequent calls to try to find CR
coming to work place

impulsivity that is potentially self-damaging

reckless driving when angry
reported repeated efforts to return to confrontation at club despite potential for arrest
substance abuse
sexual behavior, pregnancy

recurrent suicidal behavior, gestures, threats, or self-mutilating behavior

as adolescent
threats as adult
suicidal gestures as adult

affective instability due to reactivity of mood

rapid mood changes suggested per report of behavior at party, per Tanya Johnston
wakening in a rage in early morning hours, per C Radke

inappropriate intense anger, difficulty controlling anger

efforts reported by CR to prevent DR returning to confrontation despite threat of arrest
physical confrontation of CR at his workplace

unstable, intense interpersonal relationships that alternate between idealization and devaluation

previously in a relationship that she had reportedly been physical with boyfriend and he
with her
intense relationship w/ CR anger but fear of abandonment

chronic feelings of emptiness

weight gain associated w/ feelings?
low self-esteem
felt helplessness noted in Vorkoper report

Depression

sleep disturbance
weight gain
apathy
feelings of helplessness, hopelessness
guilt, shame, embarrassment
threats of suicide and prior SDB

Interviews

Tanya Johnston, friend
Tommy Butcher, friend
Dee Garcia, worked at same company as Chris R.
Billy Radke, father of Chris R.
Joseph Nunoz, coworker of Chris R.
Janie Caldwell, mother of Chris R.
Bobby Caldwell, stepfather of Chris R.

Observations

indications in DR history of unstable personality disorder associated with depression
reported wrist slashing in front of parents to avoid going to live with father. Manipulative rather than suicidal? SMB? suggested by nature of scars on arms?
reportedly viewed as potentially suicidal by brother
possible history of family violence as witness or subject of violence, comments made by DR in presence of Janie Caldwell pertaining to her fear of her father and his potential for violence, had also discussed with Bobby Caldwell, DR's stepfather, her father's violence toward her mother
threats of suicide as adult reported by CR to friend Tommy Butcher prior to death about a month before incident C had reported he'd gone home and found her w/ gun and threatening to kill self and he took it away from her" had been "putting it up like going to shoot herself"
poor impulse control as reflected in incident in which confronted spouse at work, incident with another dancer at club, at least two incidents of reckless driving described when leaving scene, e.g., work incident and leaving party, per Tanya Johnston and Janie Caldwell; Chris had reported to his mother previously that she had put gun to her head reportedly while her child was sitting in her lap
reported hx of substance abuse prior to child's birth, ethoh and cannabis use reported following per Tommy Butcher
sleep disturbance per physician report
problems w/ "stress" per physician report
self-destructive behavior? arm slashing? suicide or sm behavior? longitudinal scar on left arm 4" long and scar on back of right hand
agitation per report of CR incident at club, report of others re incident at CR's workplace mood lability, party incident, "have seen her blow up on quite a few occasions" T Butcher "She'd call quite a few times, crying, asking if Chris there, not home yet, upset irritated, comment on having had argument" per Janie Caldwell
possible dissociative states, e.g., incident described by CR when she awakened around 5am and started screaming and hitting and put out of residence by brother
aggressive demeanor, "ranting, raving, talking loud and fast" "she'd get up in his face" "he'd try to smooth things over" "every move he made she was right on his heels"
Dee Garcia, employee at CR workplace, "6-8 months after marriage they started to have conflict per Chris, she'd get violent, pushing, throwing things" also reported observing her push him during confrontation at work, per Janie Caldwell
frequent paging of CR by DR, "he'd call back, I could hear her yelling on phone at him"

Review of Records (Cont'd)

Family Violence Social Worker Interview

2/20/96

re: incident of 2/9/96, DR moving to drop charges of assault against spouse

reportedly had gone to friend's house to find husband

interviewer notes "she's really jumpy and laughing a lot. Apparently she's been on some 'diet pills' recently."

Retrospective Evaluation by Charles Vorkoper, LMSW-ACP, LPC, LMFT

reviewed police reports, letters from DR to CR, notes written by friend of DR, and attorney info opinion DR significantly at risk for suicide

N. Ponce Statement

drank w/ Chris R. through day on 29th that night learned of death of D.R.

Tel conversation w/ C.R. on following Monday--C.R. reportedly had walked thru door, D.R. came out of M.BR. W/ gun threatening to kill self, C.R. tried to pull gun away and it went off

M. Phelp Statement

drank w/ Chris R. through day

Fri conversation w/ C.R. after arrest--C.R. reportedly said he went home, went to change, D.R. started screaming and threatening to kill herself w/ gun, he tried to take gun from her and it went off when he grabbed it from her

relates C.R. bought double barreled shotgun approx 3 mo prior, house nearby had been broken into, briefly had loaned C.R. a .22 cal rifle for protection, M. Phelp became concerned when learned from C.R. of D.R.'s having threatened kill self and of her brother Mike's warning C.R. not to take her threats lightly, that she had tried to slash wrists before

C. Radke's Description re: D.Radke and her Friend Samantha Mayer

reportedly SM able to calm DR and talk her out of suicidal ideas

reported incident involving DR and SM at "Dreams" a club where they had apparently worked and had gotten into argument with other girls, apparently physical confrontation, police had been called, CR had gone to pick her up after work, had intervened to keep her from being arrested by saying he'd take her home, in spite of threat of arrest she had reportedly attempted more than once to continue the confrontation

Diana Radke - Complainant
Homicide

EVIDENCE:

Received from S. Spotswood, M.D., on March 6, 1996:

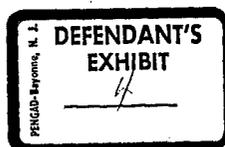

10: Handwipings from Diana Radke

RESULTS:

The chemical elements antimony and barium are components of virtually all primer mixtures and can be deposited on the backs or palms of a person who has recently discharged a firearm or a person whose hands were in close proximity to a discharging firearm. Item 10 was analyzed by flameless atomic absorption analysis.

Although an elevated level of antimony was detected on the palm of the left hand, barium levels meeting the criteria for evidence of gunshot residue were not found on item 10. Both elements must be elevated on the same part of the hand in order for the characteristics of gunshot residue to be present. The absence or low levels of these metals on the hands could be due to the deceased:

1. Not discharging a firearm
2. Discharging a firearm that does not deposit significant metallic residues on the firing hand
3. Washing or wiping the hands after discharging a firearm

RE: 253 462

Dear Christopher Radke,

Our records show that you were involved with either an accident, disorderly conduct, or ordinances offense.

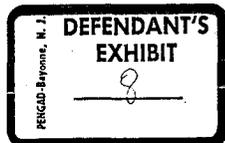

The charge filed was against Diana Radke,
for the offense of Assault - Contact.

This charge has not been taken care of either by paying or court date. If you wish to pursue this matter so a warrant will be issued for Diana Radke.

You will need to come into our office by April 21, 1997, and sign a warrant affidavit. Without your affidavit of probable cause the judge will not issue a warrant and the case will be dismissed.

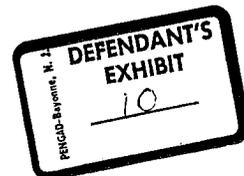

Sincerely,

Court Clerk

Charles Frederick Vorkoper

March 3, 1997

COMMENTS BY Charles F. Vorkoper, LMSW-ACP, LPC, LMFT:

To make a realistic assessment of the level of suicide risk of Diana Radke prior to her death on 02/29/96 is difficult because this clinician had no direct contact with Mrs. Radke. What I had available to me was the police reports, copies of letters Mrs. Radke wrote to her husband, and copies of a series of notes written by a friend of Mrs. Radke plus the information reported by the attorney from the District Attorney, Martha Hollowell, J.D.

However, in attempt to provide an objective rationale for a retrospective assessment I have used two instruments which are respected in the field of Suicidology, as evidenced by their inclusion in The Suicidal Patient: Clinical and Legal Standards of Care, by Bruce Bongar, Ph.D., Washington, D.C.: American Psychological Association, 1991.

The first of these is The Los Angeles Suicide Prevention Center Scale developed to assess the level of suicide risk by trained volunteers who answer a suicide and crisis hotline in the city of Los Angeles, California. This hotline was the first of its type in the United States and remains a highly respected hotline. Using this scale with the information I had available to me, Diane Radke would be seen as someone with a High Risk for suicide. The most significant features of this risk is her choice of a husband and the life style she maintained, her prior suicide attempt, and the conflictual relationship she maintained in her marriage.

The second scale is The California Risk Estimator for Suicide, a scale developed under the leadership of Jerome A. Motto, M.D. which was based on a very large sample of clients and a sophisticated research methodology. Based on the information I had, I scored her with a low risk for suicide, however this criteria is not satisfying because of my lack of contact with Mrs. Radke prior to her death. Based on the overall perspective of this scale my Clinical Estimate is that she was at Moderate Risk for suicide.

These two scales, scored retrospectively, indicates to this clinician that Mrs. Radke was at moderate to high risk for suicide. From my understanding of the events that resulted in her death, whether she did in fact place the shotgun in her mouth and fired the weapon or whether the gun was an object in a struggle between her and her husband, firing and killing her, cannot not be determined from my analysis of the information available to me. However, had she called a suicide hotline for help and I would have taken the call, or, had she been in my office prior to her death, I would have been concerned about her suicide potential and would have taken vigorous actions to protect her from the possibility of suicide.

Los Angeles Suicide Prevention Center Scale

(Bolded comments and scores reflect the assessment of items by Charles Vorkoper and the source of the assessment.)

Age and Sex (1-9)	Rating for Category
Male

 Other (describe):

Suicide Plan (1-9)
 Lethality of proposed method - gun, jumping, hanging, drowning, knife, pills, poison, aspirin (1-9) (9)
 Shotgun held in situation prior to death
 Specific detail and clarity in organization of plan (1-9) (?)
 Specificity in time planned (1-9) ()
 Bizarre plan (1-9) ()
 Rating of previous suicide attempts (1-9) (7)
 Earlier arm slashing - reported by attorney
 No plans (1-3) ()
 Other (describe):

Resources (1-9)
 No sources of support (family, friends, agencies, employment) (7-9) ()
 Family and friends available, unwilling to help (4-7) ()
 Financial problems (4-7) (7)
 Concerns expressed in diary
 Available professional help, agency or therapist (2-4) ()
 Family and/or friends willing to help (1-3) ()
 Stable life history (1-3) (3)
 Notes and friend notes, attorney report unstable life history
 Physician or clergy available (1-3) ()
 Employed (1-3) ()
 Finances no problem (1-3) ()
 Other (describe):

Prior Suicidal Behavior (1-7)
 One or more prior attempts of high lethality (6-7) (7)
 Teenage dangerous arm slashing
 One or more prior attempts of low lethality (4-5) ()
 History of repeated threats and depression (3-5) ()
 No prior suicidal or depressed history (1-3) ()
 Other (describe):

Medical Status (1-7)
 Chronic debilitating illness (5-7) ()
 Pattern of failure in previous therapy (4-6) ()
 Many repeated unsuccessful experiences with doctors (4-6) ()
 Psychosomatic illness, e.g. asthma, ulcer, hypochondria (1-3) ()
 No medical problems (1-2) ()
 Other (describe)

Communication Aspects (1-7)
 Communication broken with rejection of efforts to reestablish by both patient and others (5-7) (7)
 Notes from Diana to husband
 Communications have internalized goal, e.g., declaration of guilt, feelings of worthlessness, blame, shame (4-7) ()
 Communications have interpersonalized goal, e.g., to cause guilt in others to force

behavior, etc. (2-4) (4)

Notes from Diana to husband

Communications directed toward world and people
in general (3-5) ()

Communications directed toward one or more specific
persons (1-3) ()

Other (describe):

Reaction of Significant Others (1-7)

Defensive, paranoid, rejected, punishing
attitude (5-7) ()

Denial of own or patient's need for help (5-7) ()

No feelings of concern about the patient; does
not understand the patient (4-6) (6)

Husband did not act in a concerned manner - see notes

Indecisiveness, feelings of helplessness (3-5) (5)

Notes reflect high levels of felt helplessness

Alternation between feelings of anger and rejection
and feelings of responsibility and desire
to help (2-4) (4)

Notes reflect this alternating

Sympathy and concern plus admission of need
for help (1-3) ()

Other (describe):

DIVIDED BY 10: 12.8

SUICIDE POTENTIAL: HIGH

Low Risk: 1-3
Medium Risk: 4-6
High Risk: 7-9

The California Risk Estimator for Suicide

The Suicide Risk Assessment Scale

Instructions

1. The Suicide Risk Assessment Scale is designed to estimate the risk of suicide in adults aged 18-70, during a two-year period following the time of assessment.
2. The Scale is primarily applicable to persons known to be at some risk, such as those in a serious depressive state, having suicidal thoughts or impulses, or having made a recent suicide attempt.
3. The Scale is to be administered by a clinician, not self-administered. Responses to the items in the first column are best determined in the course of a clinical interview. The information need not be obtained in the listed order.
4. *The subjective judgment of the interviewer is to be used throughout in categorizing the response, as data provided in the clinical situation may be incomplete, ambiguous or conflicting.*
5. For the one most appropriate response category in the second column, the indicated "assigned score" in the third column should be entered into the last column as the "actual score." *If any data are missing or unobtainable, score that item zero.*
6. Total the fifteen actual scores and determine from the Table of Risk what category of risk is scored. This is expressed in three ways: (a) numerically, on a scale of one to ten, representing the decile of risk, (b) descriptively, from "Very Low" to "Very High," and (c) an estimated percentage of risk during the two years following assessment.

The Suicide Risk Assessment Scale is intended as a supplement to, not a substitute for clinical judgment. A thorough evaluation is indicated in any serious emotional disturbance. Individual uniqueness suggests that when the Scale is not consistent with clinical judgment, clinical judgment should be given precedence.
